Re Chickmagalur Water Supply

****

Sir,

With reference to the above, I have the honour to state that I inspected the place on the 23rd and 24th instant with the President of the Municipality and the Chief Officer and discussed the water supply situation with them and also with the Deputy Commissioner and have made certain suggestions to them for immediate relief In order to understand clearly the situation, I am giving below a brief account of what has been done so far by this Department in the matter

The Municipality is in charge of the Water Supply and I am informed by the Chief Officer that there is no acute distress for water They are supplying about 115000 gallons of water daily and are rationing it as per timetable given to them to different zones as per advise given to them by this Department last year The present population being 10203, the daily consumption works out to nearly 11 gallons per head per day This is the usual allowance on which all the Water Supply Schemes for Mofussil towns are designed This being the hot season, there is great demand for

the

the water and consequently more water is used But it seems people are not satisfied with rationing of water and they want water all the 24 hours The consumption in Chickmagalur seems to be tremendous and there seems to be no economy in the use of water If the system is kept open whole day and water is given all the 24 hours, the present quantity will be consumed in no time and there will be great hardship In City like Bangalore water is rationed and is to be had only for a few hours in the day In all the mofussil towns where this Department has given water supply schemes, they are satisfied with 10 gallons per head per day and no such trouble is experienced there At Chickmagalur too, the scheme is designed for 10 gallons per head per day If more water is required they will have to duplicate the main to bring in more water for which an estimate was sent from this Department a year ago - but no action is taken by the Municipality over it

2 This Department was in charge of the water supply from March 1928 to September 1929 to study the water supply difficulty of the place and suggest remedies As a result of one year's working and investigation a report was submitted to the Chief Engineer in this office No 413 dated 18-4-1929 as to the causes contributing to the scarcity of water and definite proposals followed by estimates for improving the system were made When this Department took over charge in March 1928 the capacity of the delivery main was found to have fallen from 104 gallons per minute to 57 gallons owing to silting up of the main due to not scouring it at frequent intervals as instructed This was set right by continuous scouring for some months and the capacity was brought upto 90 and it was steady at about 81 gallons per minute but on the day of inspection on 24th instant, it was tested to be 74 gallons per minute Evidently the main is again not being scoured frequently I would advise the Municipality to immediately scour the main once a week at least, if not the discharge

will

will further go down and bring hardship to the public A filter bed was thoroughly choked up which was completely ove hauled and the other two which showed signs of choking were recommended for being overhauled - but till today though it is nearly 2 years nothing is done by the Municipality

3 As a result of the investigation as reported in the letter referred to above (No 413 dated 18-1-1929) following estimates were sent to the Municipality for duplicating the main and improving the distribution system -

(1) Estimate for Rs 11 115/- for removing the last 4000 ft of 4" delivery main by 5" so as to give an additional discharge of about 25000 gallons per day - forwarded to the Municipality in this office No 2089 dated - 18-5-1929

(2) An estimate for duplicating the main and improving the distribution system for Rs 1,33,340/- forwarded to the Chief Engineer in this office No 19 dated 10/19-7-1929 and to the Municipality for their views &c , in this office No 408 dated 29/30-8-1929 The main is nearly 5 miles in length

(3) An estimate for Rs 660/- for some minor improvements at the head works forwarded to the Municipality in this office No 1965 dated 2-5-1929

For estimates 1 and 2 Municipality have resolved that they would consider the question after the reservoir at Hirelolale near head works is constructed The reservoir at Hirelolale will be more for irrigation than for water supply but if it comes into existence, water supply also can be drain from it This was investigated some 15 years ago but was abandoned as it was not remunerative then It is again being investigated now by Kadur Division and from the informal talk I had with the Executive Engineer, Kadur Division, I learn that the project is not likely

to

to be remunerative now too and if so it is not likely to see the light of the day for some years to come Is the Municipality not going to do anything till then to give relief to the people? But this should not prevent the Municipality from duplicating the main as the delivery main can be easily linked to the reservoir when it comes into existence without the least trouble and without much expenditure as the line of the bund crosses the delivery main The same Yegachi stream is the only perennial and sure source for duplicating the main as even in this hot season and with the tampering of the water by the ryots (as will be seen in the next para) there was noticed by me a good quantity of water flowing in the stream on the 24th the headworks being a little below the junction of Yegachi and Kabarhalli streams had water from both the streams

4 Another serious trouble with the water supply of the town in this hot season is the tampering of water in the streams by the ryot by diverting away the water from the stream to their lands for either drinking or irrigation purposes and thereby reducing the quantity of water in the stream On the 24th evening when I inspected the place a temporary bund was put at B fully across the width of the Yegachi stream (vide sketch enclosed) and all the water was diverted to Hirekolale Village and only little leakage and seepage water was seen flowing in the stream down below Lower down a furlong from B another bund at C was put and what little water was flowing from B to C was also diverted into a new channel said to be recently opened In the stream from C to A where the water supply head works are situated, very little water was seen flowing and what was seen was the leakage and seepage from the channels above Had it not been for the flow from Kabanhalli stream, there would have been left very little water for water supply This trouble is likely to increase every day as the days get hotter and hotter It is for the revenue authorities to come to the rescue of the --

Municipality

14

municipality and safeguard the interest of the water supply to the town by preventing this illegal tampering of water They may be allowed to take the usual mamool water, but they should not be allowed to block up the stream entirely and divert all the water The channel from C which seems to be opened now without any body's permission requires to be closed after investigation Water from B in the Hirelolale channel is mainly drawn for the water supply of the Hirelolale village - if a well or two is given to the village by the municipality, the villagers are not likely to tamper with the stream Some amicable settlement between the municipality and the village is very necessary in the interest of safeguarding the water supply to the town I had a talk with the Deputy Commissioner about this who informed me that he would do his best to stop this tampering of water

This matter was noticed by me last year too and communicated to the municipality and the Deputy Commissioner as will be seen from the following extract of my report in the matter -

"Another difficulty which has of late arisen in the hot weather is the tampering by ryots of the head works - and the diversion of the water from the stream A few days ago, this mischief led to a considerable reduction of water in the delivery main and there was hue and cry in the town President's Memorandum dated 16th March 1929 a copy of which was sent to the Deputy Commissioner in this office No 1691 dated 1-4-1929 and also a report from Suboverseer dated 1-4-1929 a copy of which was sent to the Chief Engineer in this office No 395 dated 5-4-29 will speak for themselves Some drastic steps are - - necessary on the part of the Revenue Authorities to put a stop to this kind of mischief with the water works of the town"

5 Another trouble in the system - I mean in the distribution system - which was noticed last year and was noticed this

year

year too is the difficulty of supplying adequate water to the higher localities of the town When the water works were new house and other connections were few, this difficulty was not so much felt as is the case now In the last 5 years there was indiscriminate multiplication of house connections and fountains with the result that the supply is found unsatisfactory in many of the taps owing to very heavy draw on them some of them are direct from the 6" main on the Bazaar Road In another instance though there were five public fountains on 1" galvanized iron pipe laid on the Jail Road and though the draw on them very heavy for 1" pipe, six house connections were given from the same 1" line If the system is to be taxed and strained like this it is bound to give trouble and there will be hue and cry from the public This matter too was brought to the notice of the municipality last year in this office No 1993 dated 3-5-1929

I would advise the municipality to stop giving further house connections or public fountains till the water supply is improved and more water brought in

In order to improve the service to higher localities, an estimate for about Rs 9,600/- is included in the big estimate for duplicating the main referred to in para 3 above It is to put an independent 4" main on the Jail Road by removing 4" pipe line going to Piremagalur and replacing a 2" pipe in its place This main will relieve the strain on 6" old main which passes through the Bazaar Road and on which there are a number of public fountains and house connections given direct from the main

6 From the above brief account it will be seen that this Department have given the municipality all possible technical help and suggestion with definite proposals to improve the water supply of their town But for some reason or the other - especially the financial I believe - nothing is attempted till now Even the small petty works at the head works costing about Rs 500/- in the

the overhauling and cleaning of the two filters are not being attempted though this Department was urging for it for the last more than a year

As the above proposals involve a good sum of money which perhaps the Municipality is not in a position to spend immediately and as it will take some time to settle the ways and means of financing these proposals and as the public are likely to put to hardship, I would advise the Municipality to undertake the following measures immediately to give some relief to the town -

1 They must immediately try a few boreholes in the town to supplement the present supply I am very hopeful about the boreholes, as the town is situated in a hollow down below the flats The Municipality must immediately put themselves in communication with the Industrial Department and start a few boreholes within the town in those localities where there is trouble

2 The tampering of water by the ryots at the headworks must be stopped with the help of the Deputy Commissioner and some amicable settlement may be arrived at with the Village of Hirekolale by giving them wells for drinking water

3 Not a single house connection or public fountain to be given until the water supply is improved

4 All water for gardening or building purposes should not be allowed to be taken from the taps - but well water only must be used for this purpose The municipal staff must go round all the public fountains and house connections and prevent all possible waste and misuse of water

5 The delivery main must be scoured once a week at least

Above are the measures for immediate relief of which putting some boreholes is most important If good quantity of water

17

water is found by these borings from underground, it is possible that it may save the Municipality the cost of duplicating the main. The Government may kindly be asked to order the boring plant to be immediately sent to Chickmagalur.

As for putting the water supply of the town in a more permanent and sure footing, the Municipality cannot help but duplicate the main to bring in more quantity of water for which they have already the proposals in their hands for last one year. They must come to some definite decision about it and seriously think of ways and means of financing it. If it is held up for want of funds, I would suggest the Municipality either to raise a loan in the open market or borrow the money from the Government if possible. I am afraid unless and until they duplicate the main there will be the same trouble year after year in the hot weather.

I am sending the copies of this letter to the Chief Engineer, Deputy Commissioner and the Municipal President.

I have the honour to be,
Sir,
Your most obedient servant

Executive Engineer,
Sanitary and Town Planning Division

SIR

Re Improvement to the water supply of Chikmagalur Town

With reference to your letter No L 8707/A1 313-29-4 dated 2-6-30 and the subsequent D O No L 8937/A1 313-29-5 dated the 12-6-30 regarding the above subject, I have the honor to forward herewith copy of letter No P C 17 /29-30 dated 12-6-30 with its enclosures from the President Municipal Council, Chikmagalur, soliciting sanction for certain items of expenditure in this connection, and to state as follows -

2 The Executive Engineer, Sanitary and Town Planning Division had long with his letter No 1767 dated the 29th April 1930 forwarding copy of his notes re: the water supply of the town to the President, Chikmagalur Municipal Council forwarded 3 estimates as noted in the margin for immediate action to be taken The subject was placed before the meeting of the Municipal Council on 6-6-30 and they resolved to undertake immediately the 1st two items of work with regard to the 3rd one, they propose to take it up later on

(1) Estimate for Rs 11,110/- for removing the last Section of 4" delivery main and to replace the same by 5" Cast iron pipes
(2) Estimate for Rs 660/- for repairing the head works
(3) 9600/- included in the big estimate of Rs 1,33,340/, for duplicating the main

General No

No

Enclosure No

SUBJECT

3 To meet the cost of the Ist two items which they propose to take up immediately, the Council propose to incur the same out of the closing balance at the credit of the Municipality, as no provision has been made in the Budget Estimates of the Municipal Council for the current year The closing balance at the credit of the Municipality as per cash account for the month of May 1939 is Rs 20,765-0-0 Besides they have also a sum of Rs 11,746-0-7 at their credit in the Government Savings Bank

4 Under the circumstances explained above, and also in view of the urgency of the work in question I request that sanction of Government may kindly be obtained for the estimates in question, and also to incur the expenditure of Rs 11,773/- out of the closing balance at the credit of the Municipality without trenching on the prescribed working balance

The resolution of the Municipal Council, and the two estimates referred to above are enclosed for reference

I have the honor to be,
Sir,
Your most obedient servant,

Deputy Commissioner,
Kadur District

Copy of letter No H C 172/29-30 dated 10th/12th June 1930, from the President, Municipal Council, Chikmagalur, to the Deputy Commissioner, Kadur District

=====

With reference to your letter No A3-1026-29 dated 29-5-1930 requesting me to send the resolutions of the Council sanctioning certain proposals of the Executive Engineer, Sanitary and Town Planning Division, Bangalore regarding the improvements to the Water-works of this town, I have the honour to forward herewith copy of resolution of the Municipal Council together with the estimates of Rs 11,113/- and Rs 660/- received from the Executive Engineer, Sanitary and Town Planning Division for removing the last 4" section in the delivery main and replacing with 5" pipes for improving the water supply of this town and for repairing and improving the Head Works respectively, for favour of perusal and submission to Government for sanction

The amount of the estimate for laying 5 " pipes exceeds the limit of sanction by the council and therefore it requires sanction of Government

Since the above are not budgetted works there is no provision in the current year's budget to meet the cost thereof But the Council having at their credit more funds than is necessary for a prescribed minimum closing balance resolved at their meeting held on 6-5-1930 that, the cost of the above two works may be met out of the closing balance of the Municipal Council without trenching upon the prescribed working balance

In these circumstances I request that you may be pleased to obtain sanction of Government to the above two estimates as early as possible

water is found by the [illegible] from underground, it is possible that it may [illegible] the Municipality the cost of duplicating the main the Government may kindly be asked to order the boring plant to be immediately sent to Chirchik.

As for putting the water supply of the town on a more permanent and sure footing, the Municipality cannot help to duplicate the main to bring in more quantity of water for which they have already the proposals in their hands for last one year they must come to some definite decision about it and seriously think of ways and means of financing it. If it is held up for want of funds, I would suggest the Municipality either to raise a loan in the open market or borrow the money from the Government if possible. I am afraid unless and until they duplicate the main, there will be the same trouble year after year as the rot worthless.

I am sending the copies of this letter to the Chief Engineer, Deputy Commissioner and the Municipal President.

I have the honour to be,
Sir,
Your most obedient servant

Executive Engineer,
Sanitary and Town Planning Division

Encl.

29/4/30

the overhauling and cleaning of the two filters have not been attempted though the Department was urged for [illegible] more than a year

As the above proposals involve a good sum of money, which perhaps the municipality is not in a position to spend immediately, and as it will take some time to settle the arrangements of financing these proposals, and as the public are likely to put to hardship, I would advise the municipality to undertake the following measures immediately to give some relief to the town -

1 They must immediately try a few boreholes in the town to supplement the present supply I am very hopeful about the boreholes, as the town is situated in a hollow and below the plots The Municipality must immediately put themselves in communication with the Industrial Department and start a few boreholes within the town in the low localities where there is trouble

2 The tampering of water by the pipes at the hydrants must be stopped with the help of the Deputy Commissioner and some amicable settlement may be arrived at with the Village of Kilimalile by giving the wells for drinking water

3 Not a single house connection or public fountain to be given until the water supply is improved

4 All the for plastering of buildings and so should not be allowed to be taken from the taps - but well water only must be used for this purpose The municipal staff must go round all the public fountains and house connections and prevent all possible waste and misuse of water

5 The drainage system must be scoured once a week at least

Above are the measures for immediate relief of which putting some boreholes is most important In good quantity of water

year too is the difficulty of supplying adequate water to the high localities of the town. When the scheme of private house and other connections were for, this difficulty was not so much felt as at the case now. In the last 5 years there was indiscriminate multiplication of house connections and taps with the result that the supply is found unsatisfactory in many of the taps owing to very heavy loss on the some of the mains direct from the 6" main on the Station Road. In another instance though there are five public fountains on 1" galvanised iron pipe laid on the Jail Road and though it is drawn on the very low for 1" pipe, six house connections were given for the same 1" line. If the system is to be kept in satisfactory state it is bound to give trouble which will be inconvenient for the public. This matter too was brought to the notice of the municipality last year in this office No 1993 dated 4-5-1939.

I would advise the municipality to stop giving further house connection or public fountains till the water supply is improved and more water brought in.

In order to improve the service to higher localities, an estimate for about Rs 9,300/- is included in the big estimate for duplicating the main referred to in para 3 above. It is to put an independent 4" main on the Jail Road by leaving 4" pipe line going to Kanakamalai and replacing a 3" one in its place. This main will relieve the strain on 6" old main which passes through the Station Road and on which the above number of public fountains and house connections are directly fed from the main.

6. From the above brief account it will be seen that this department have given the municipality all possible technical help and suggestion with definite proposals to improve the water supply of their town. But for some reason or the other - especially the financial I believe - nothing is attempted till now. Even the small petty works at the head of the main about Rs 500/- till

the

municipality and safeguard the interests of the people of the town by preventing this illegal diversion of the water. They may be allowed to draw the usual amount of water for their domestic purposes but should not be allowed to block up the stream entirely and thereby divert all the water. The channel from C which seems to be of recent new without any body's permission requires to be closed after investigation. Water from B in the riverside channel is mainly drawn for the water supply of the riverside village - if a well or two is given to the villagers by the municipality which I believe is not likely to interfere with the stream some amicable settlement between the municipality and the village is very necessary in the interest of safeguarding the water supply to the town. I had a talk with the Deputy Commissioner both the who informed me that he would do his best to stop the tampering of water.

This matter was noticed by me last year too and communicated to the municipality and the Deputy Commissioner as will be seen from the following extract of my report in the matter -

"Another difficulty which has of late arisen in the hot weather is the tampering by some of the local people - and the diversion of the water from the stream. A few days ago, this mischief led to a considerable reduction of water in the delivery main and there was hue and cry in the town. Present's demi official dated 13th March 1929 a copy of which was sent to the Deputy Commissioner in this office No 1691 dated 1-4-1929 and also a report from subovee see dated 1-4-1929 a copy of which was sent to the Chief Engineer in this office no 705 dated 5-4-29 will speak for themselves. Some drastic steps are necessary on the part of the municipality to put a stop to this kind of mischief with the water works of the town"

3 Another trouble in the system - I mean in the distribution system - which was noticed last year was noticed this year

to be remunerative now too and if so it is unlikely to see the light of the day for some years to come. Is the municipality not going to do anything till then to relieve itself to the people? but this should not prevent the municipality from duplicating the main as the delivery main can be easily linked to the tesol or when it comes into existence without the least trouble and without much expenditure as the line of the bund cross the delivery main. The same Yegachi stream is the only perennial and sure source for duplicating the main as even in this hot season and with the damming of the water by the ryots (as will be seen in the next para) there was noticed by me a good quantity of water flowing in the stream on the 21th, the head or s being a little below the junction of Yegachi and Kabinhilli streams hil water from both the streams

4 Another serious trouble with the water supply of the town in this hot season is the tampering of water in the streams by the ryots by diverting away the water from the stream to their lands for either bunding or irrigation purposes and thereby reducing the quantity of water in the stream. On the 21th evening when I inspected the place a temporary bund was put it b fully across the width of the Yegachi stream (vide sketch enclosed) and all the water was diverted to Kaledale Village and only little leakage and seepage water was seen flowing in the stream down below. To reach a furlong from A another bund at C is put and but little water is flowing from A to C was also diverted into a new channel said to be recently opened In the stream from C to A where the water supply head works are situated, very little water was seen flowing and it was seen as the leakage and seepage from the channel above. Had it not been for the flow from Kabinhilli stream there would have been left very little water for water supply. This trouble is likely to increase every day as the days get hotter and hotter. It is for the revenue authorities to come to the rescue of the --

municipality

will fu th go lown unl p ing I u lshi to the ublic \ f_ll bod was thoro u hly cl o l l up which i s co l to / ov h ul l unl the othe two hich showed signs of cho in for roco l i l for being over h ul o l - but till to l thou h it is no l 2 ye u nothing is lone by the unicipility

the water [illegible] but it
people are not [illegible] the municipality with
water all the 24 hours. The contribution in this direction seems
to be the most unfair one as it seems to be [illegible] in the use of
water. If they [illegible] water for even
all the 24 hours, the present quantity will be consumed in no
time and there will be [illegible] In fact [illegible] water
rationed unfairly as to be had only for a few hours in the
day. In all the municipal towns this Department has [illegible]
water supply schemes, they are satisfied with 10 gallons per
head per day and no such [illegible] exceptional there it
their value too, the scheme is less than 10 gallons per head
per day. If more water required they will have to duplicate
the main to bring in more water for which no [illegible] is sent
from this Department [illegible] - but no action taken by the
municipality over it.

2. This Department was in charge of the water supply from
March 1950 to September 1953 to study the [illegible] difficulty
of the place and suggest remedies. As a result of one year's
working and investigation a report was submitted to the Chief
Engineer in this office on his letter 10-4-1953 as to the causes
contributing to the scarcity of water and definite proposals
followed by estimates for improving the system are also given
this Department took over charge in March 1953 the capacity of the
delivery mains was found to have fallen from 10 gallons per
minute to 87 gallons only due to [illegible] the mains not
cleaning it at frequent intervals as in the case [illegible] was
[illegible] by continuous [illegible] for one month and the capacity was
brought up to 30 gallons only. At present 81 gallons per minute
but on the day of inspection on 21th instant, it was found to
be 71 gallons per minute. Apparently the main is [illegible] not being
cleaned frequently. I would like the authority to immediately
clean the mains once a week at least, if not the pipes will

Reference No L 7470/ 1 313-29-2 dated 1st April 1930
Re Chamarajpur water supply

Sir,

With reference to the above, I have the honour to state that I inspected the place on the 23rd ult in company with the President of the municipality and the Chief Officer and discussed the water supply situation with them and also with the Deputy Commissioner and have also certain suggestions to make for immediate relief. In order to make this clearly the object of, I am giving below a brief account of what has been done so far by this Department in the matter.

The municipality is in charge of the supply and I am informed the chief difficulty is that there is no source from which water can be supplied in about 15000 gallons daily and the minimum it is desirable even to have is sufficient for a population of 20000 persons. Taking the present population being 10 03, the daily consumption will come out to nearly 11 gallons per head or say 11 lakhs the usual allowance on such a water supply. There is no source to be tapped for the
